Comments: Today, January 4 2000, the San Bernardino Sun newspaper had a major story relative to the transportation of high level nuclear waste products through San Bernardino County. They inferred this was some sort of conspiracy to poison the citizens of the county.

- 1 I think this is a bunch of hooey. The many restrictions the government places on such transportation will eliminate the potential for accident. They will not be driving down I-15 like the typical long haul driver. They will be more of a nuisance to the populace with all the safety precautions that will be imposed.

I think this is the ideal place to store this bad stuff.  
Now that we have it, we must deal with it. So get on with the program.
